UNEARTHING THE ENVIRONMENTAL IMPACT OF HUMAN ACTIVITY: A GLOBAL CO₂ EMISSION

INTRODUCTION:

OVERVIEW

Global warming is one of the biggest challenges currently being faced by the human race, although correlation is not causation, a likely cause of global warming is due to increased atmospheric carbon dioxide from human activities. **CO₂ Emission** refers to the Carbon Dioxide emitted throughout the world. For this analysis we will be focusing on CO₂ Emissions and its effect on the world we live in as well as some key factors and stats that may play a role in the emission of CO₂ globally. Fossil fuel use is the primary source of CO₂. The data throws light onto how much fossil fuels are burnt, per year, per nation, which amounts to an increase in CO₂ every year. This will help researchers and environment experts to predict global warming. So countries should set a goal to decrease this amount yearly. Analysis Global Co₂ Emission across countries from 1975 to 2020. This dataset contains a record of Co₂ Emission by each Country and Region of Earth, here we are going to analysis and visualization Country wise, Region wise and Overall Co₂ Emission on Earth.

PURPOSE

Measurements of emission can be used to understand the relative importance of a given source compared to other source and in developing emission inventories.

PROBLEM DEFINITION & DESIGN THINKING:

EMPATHY MAP

Template

Empathy map

Use this framework to develop a deep, shared understanding and empathy for other people. An empathy map helps describe the aspects of a user's experience, needs and pain points, to quickly understand your users' experience and mindset.

[Share template feedback](#)

Need some inspiration?
See a finished version of this template to kickstart your work.
[Open example](#)

Build empathy
The information you add here should be representative of the observations and research you've done about your users.

Says
What have we heard them say?
What can we imagine them saying?

Thinks
What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

Does
What behavior have we observed?
What can we imagine them doing?

Feels
What are their fears, frustrations, and stresses? What other feelings might influence their behavior?

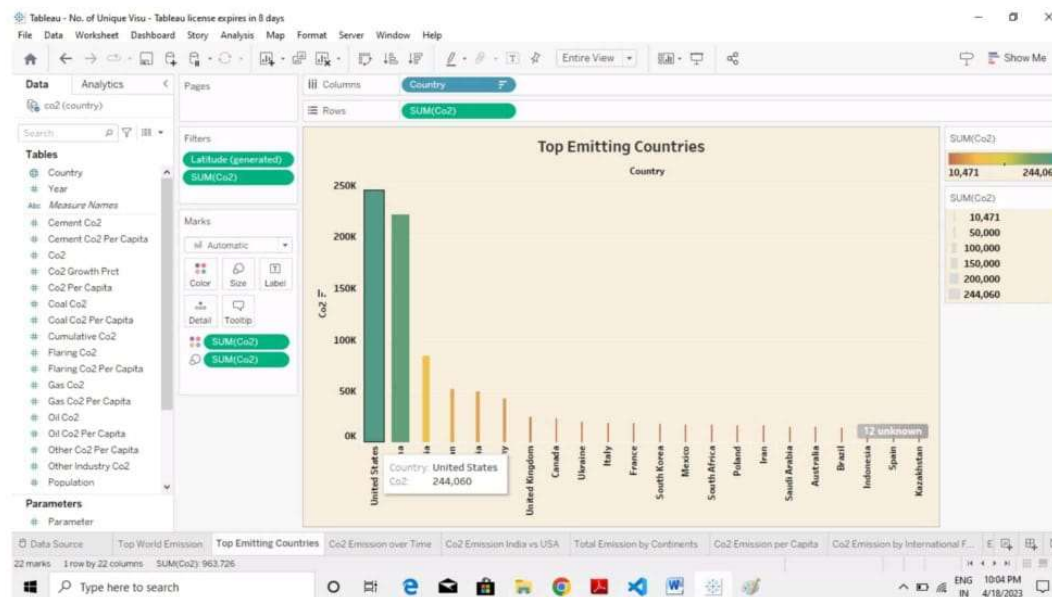

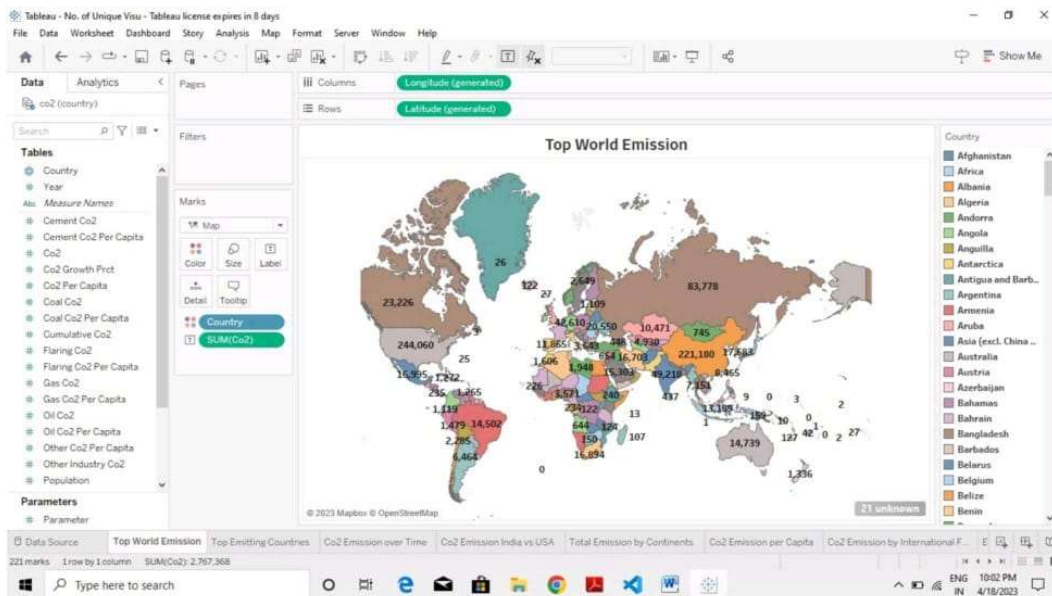

Give them a name and a portrait to empathize with your persona.

CO2 Emission Analysis

Home About **Advantages & Disadvantages** Dashboard Story Contact

ADVANTAGES

Disadvantages

Advantages

Advantages of A Global CO2 Emission Analysis.

- ✔ Co2 is an essential nutrient for land - based plants.
- ✔ The Earth's biosphere has also experienced a relative Co2 famine for many millennia - the recent increase in Co2 levels has thus had a measurable, positive effect on plant life.
- ✔ Carbon dioxide is an important greenhouse gas that helps to trap heat in our atmosphere.
- ✔ Without it, our planet would be inhospitably cold.
- ✔ However, an increase in Co2 concentrations in our atmosphere is causing average global temperature to rise, disrupting other aspects of Earth's climate.

CO2 Emission Analysis

Home About **Advantages & Disadvantages** Dashboard Story Contact

ADVANTAGES

DISADVANTAGES

Disadvantages

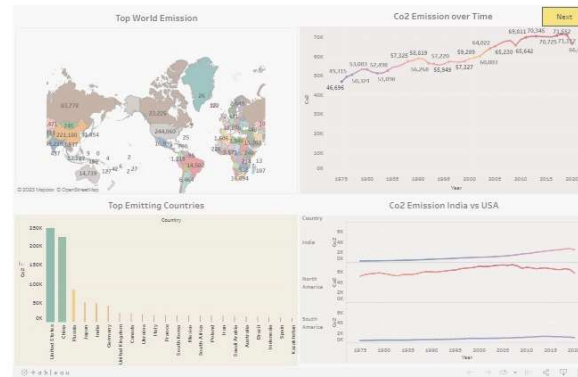

Disadvantages of A Global CO2 Emission Analysis.

- ✔ High Carbon dioxide levels can cause poor air quality and can even extinguish pilot lights on gas - powered appliances.
- ✔ CO2 is considered to be minimally toxic by inhalation.
- ✔ The Primary health effects caused by CO2 are the result of its behavior as a simple asphyxiant.
- ✔ A simple asphyxiant is a gas which reduces or displaces the normal oxygen in breathing air.
- ✔ Symptoms of mild CO2 exposure may include headache and drowsiness.

DASHBOARD

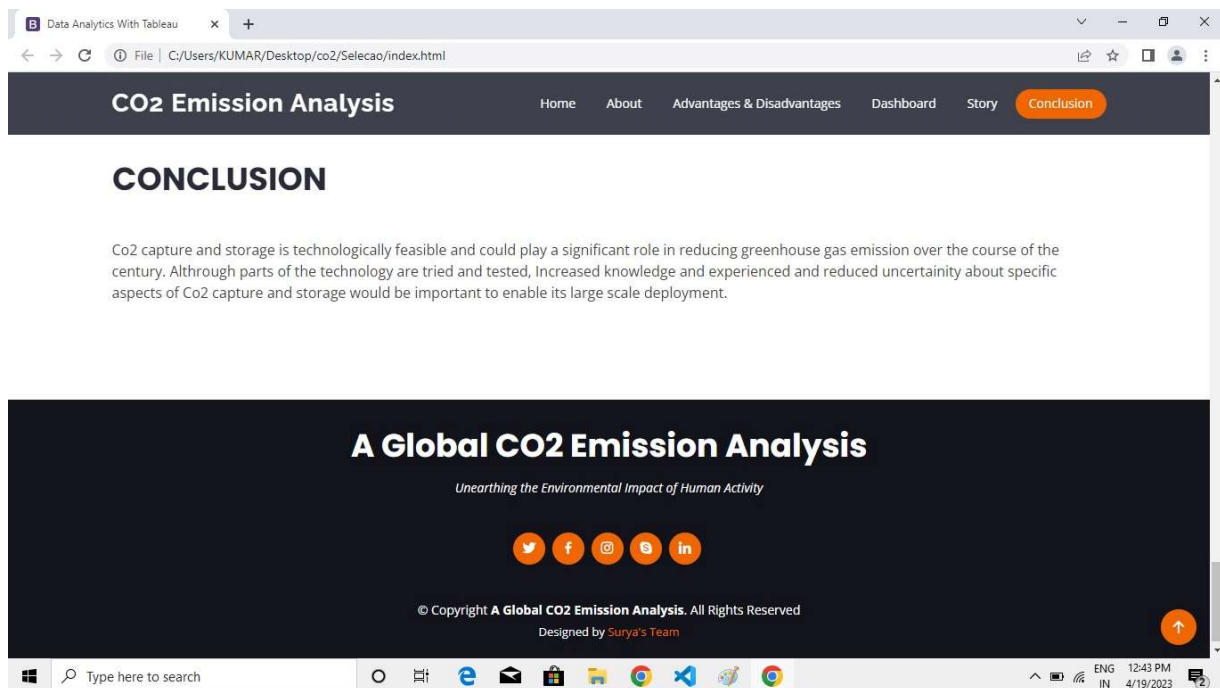

"PROGRESS REPORT" OR "REPORT" AND CONSIDERED A FORM OF DATA VISUALIZATION.

STORY

A LINEAR SEQUENCE OF ILLUSTRATIONS USED IN ANIMATION TO DEVELOP A BROADER STORY.

ADVANTAGES & DISADVANTAGES:

ADVANTAGES

- Higher carbon-dioxide levels will be beneficial.
- CO2 is an essential nutrient for land-based plants. The Earth's biosphere has also experienced a relative CO2 famine for many millennia-the recent increase in CO2 levels has thus had a measurable, positive effect on plant life.Safely storing the public's wealth.

- Carbon dioxide is an important greenhouse gas that helps to trap heat in our atmosphere. Without it, our planet would be inhospitably cold. However, an increase in CO₂ concentrations in our atmosphere is causing average global temperatures to rise, disrupting other aspects of Earth's climate.

DISADVANTAGES

- CO₂ is considered to be minimally toxic by inhalation. The primary health effects caused by CO₂ are the result of its behavior as a simple asphyxiant. A simple asphyxiant is a gas which reduces or displaces the normal oxygen in breathing air. Symptoms of mild CO₂ exposure may include headache and drowsiness.
- The amount of carbon emissions trapped in our atmosphere causes global warming, which causes climate change, symptoms of which include melting of the polar ice caps, the rising of sea levels, the disturbance of animals' natural

habitats, extreme weather events, and so many more negative side effects that are dangerous.

APPLICATIONS:

- ❖ The carbon (and oxygen) in CO₂ can be used as an alternative to fossil fuels in the production of chemicals, including plastics, fibres and synthetic rubber. As with CO₂- derived fuels, converting CO₂ to methanol and methane is the most technologically mature pathway.
- ❖ Carbon dioxide is used as a refrigerant, in fire extinguishers, for inflating life rafts and life jackets, blasting coal, foaming rubber and plastics, promoting the growth of plants in greenhouses, immobilizing animals before slaughter, and in carbonated beverages.

CONCLUSION:

"The rising level of atmospheric CO₂ could be the one global natural resource that is progressively increasing food production and total biological output, in a world of otherwise diminishing natural resources of land, water, energy, minerals, and fertilizer."

FUTURE SCOPE:

- In the Annual Energy Outlook 2022 (AEO2022) Reference case, which assumes no changes to current laws or regulations, the U.S. Energy Information Administration (EIA) projects that U.S. energy-related carbon dioxide (CO₂) emissions will fall to 4.5 billion metric tons in 2037, or 6% below the energy-related CO₂

YYYYYYYYYYYYYYYYYYYY.          </a>
ZZZZZZZZZZZZZZZZZZZZ.          <p>Data analysis can be a long
  process but can be simplified when the correct analysis method is
  applied. The process of data analysis should be thorough and intensive
  to give the correct inference. With narrative qualitative data content
  analysis would be useful and most appropriate to induce the information.
  The content analysis gives us the better option of analyzing the
  narrative data provided since it analysis what the respondents have
  raised in their answers. It also helps to know how the statements relate
  and establish the emphasis which the respondents put forward.</p>
